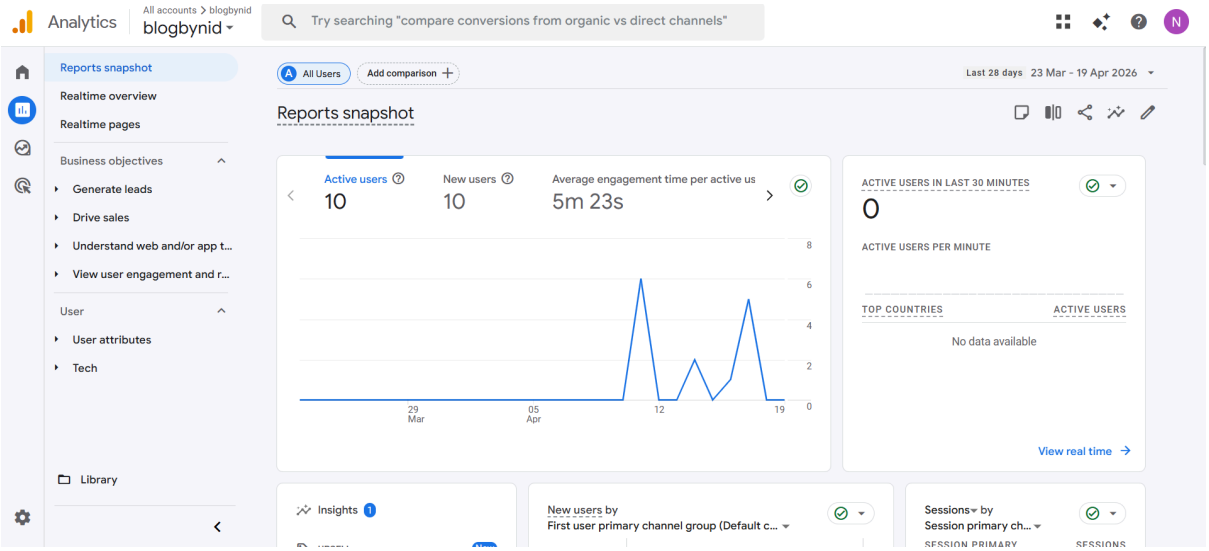
Module-6

1. What are events in Google analytics?

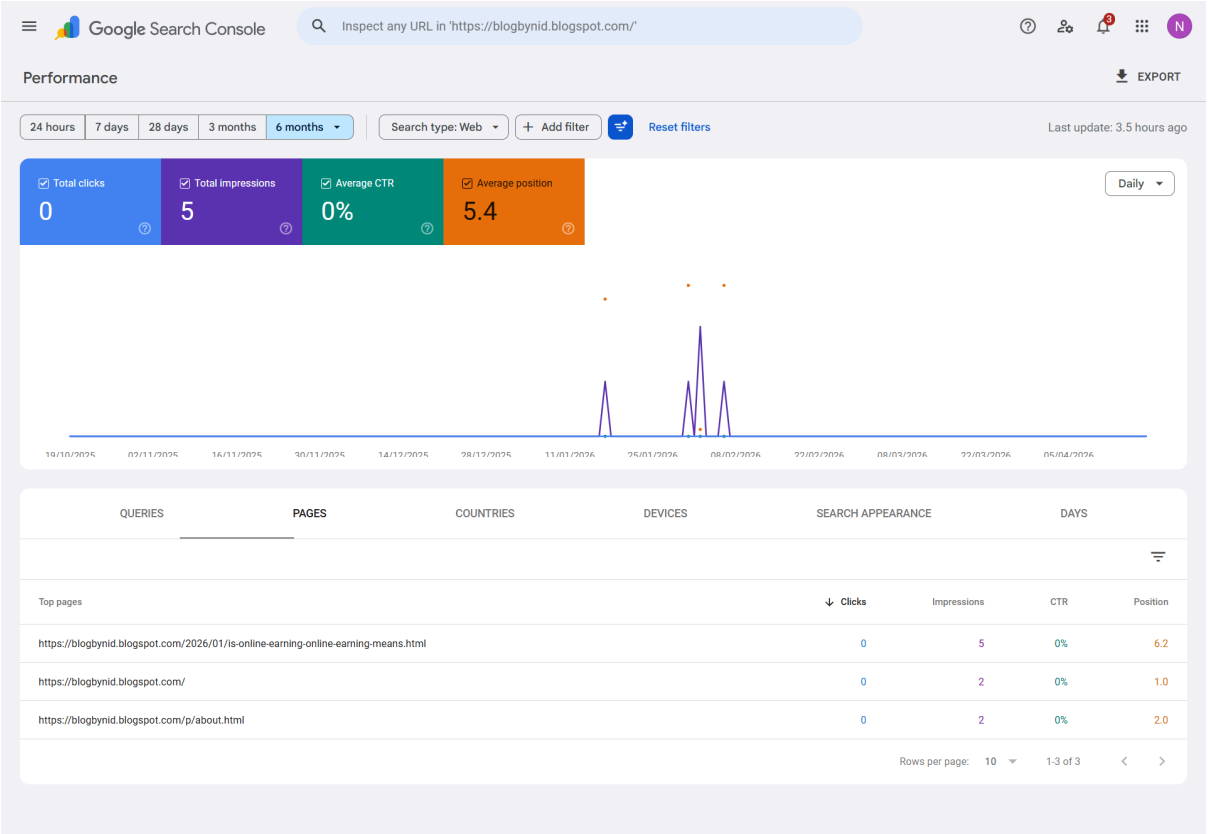
Ans: In Google Analytics, events are specific user interactions that take place on a website or app. These interactions can include actions like clicking a button, submitting a form, watching a video, or scrolling a page. Events help track how users engage with different elements beyond just page views. By analyzing events, businesses can better understand user behavior and improve website performance and user experience.

2. Connect your created website and blog to search console, analytics, and google tag manager and add your faculty as a user with required permission in it.

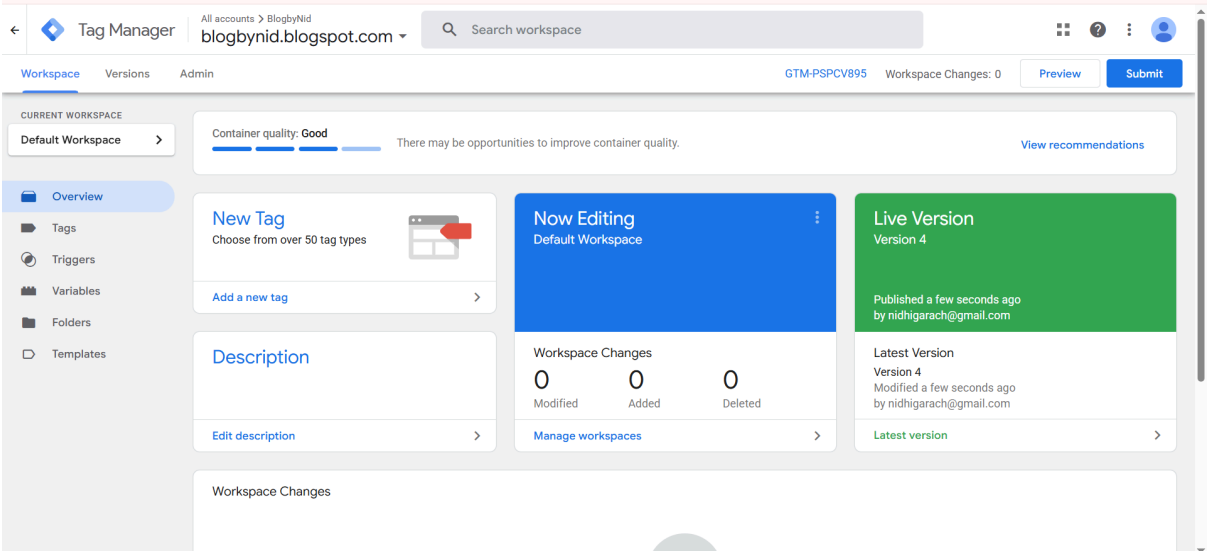
My blog site connected to google analytics:

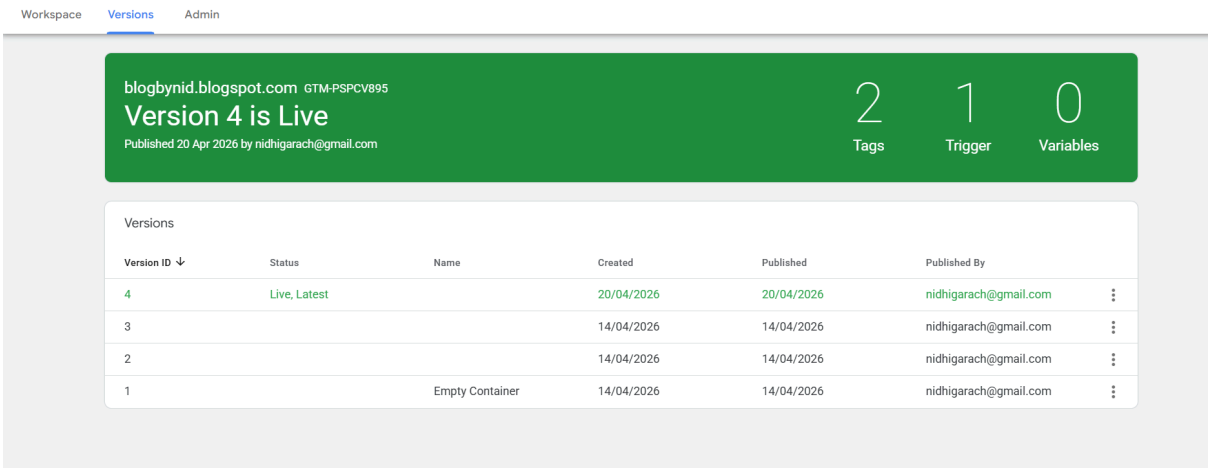


Google Search Console:

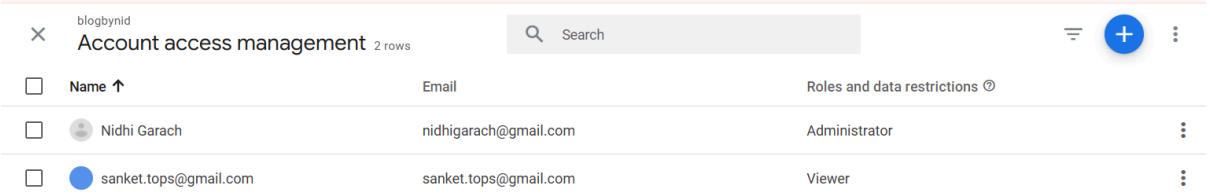


Google Tag Manager:

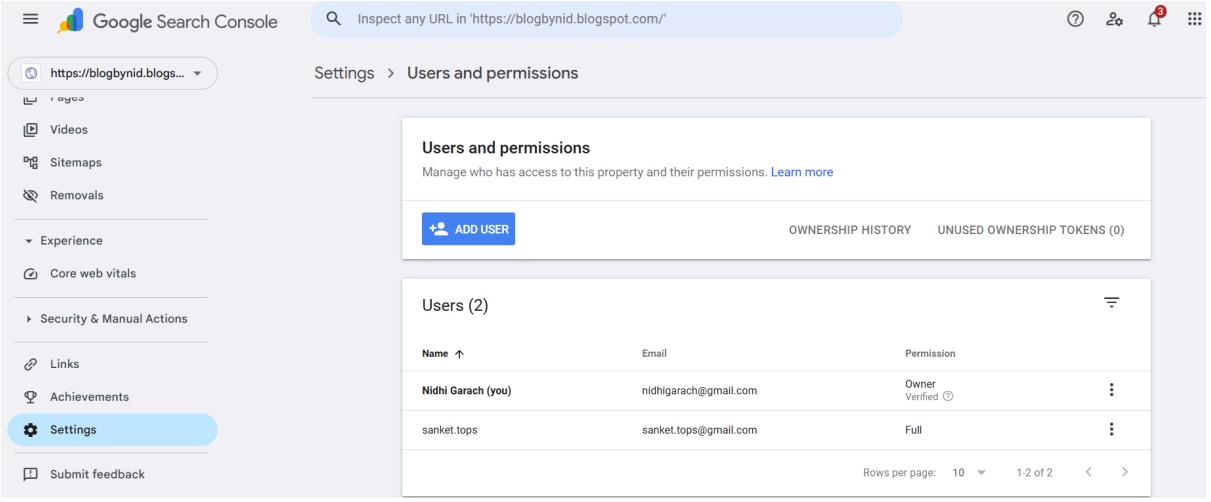




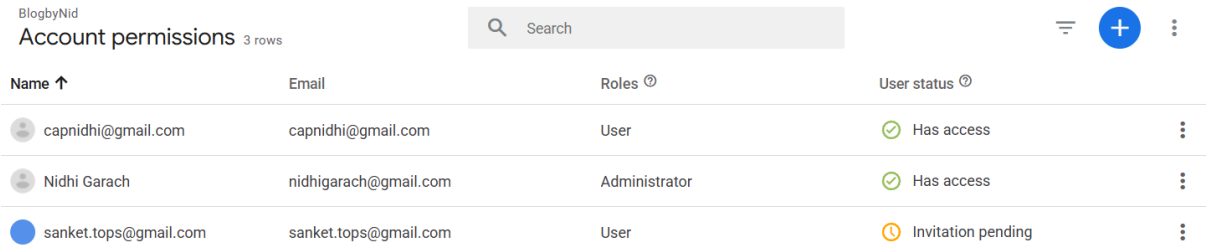
Added faculty as user with required permission in Google Analytics: *(Property name: blogbynid)*



Added faculty as user with required permission in Google Search Console:

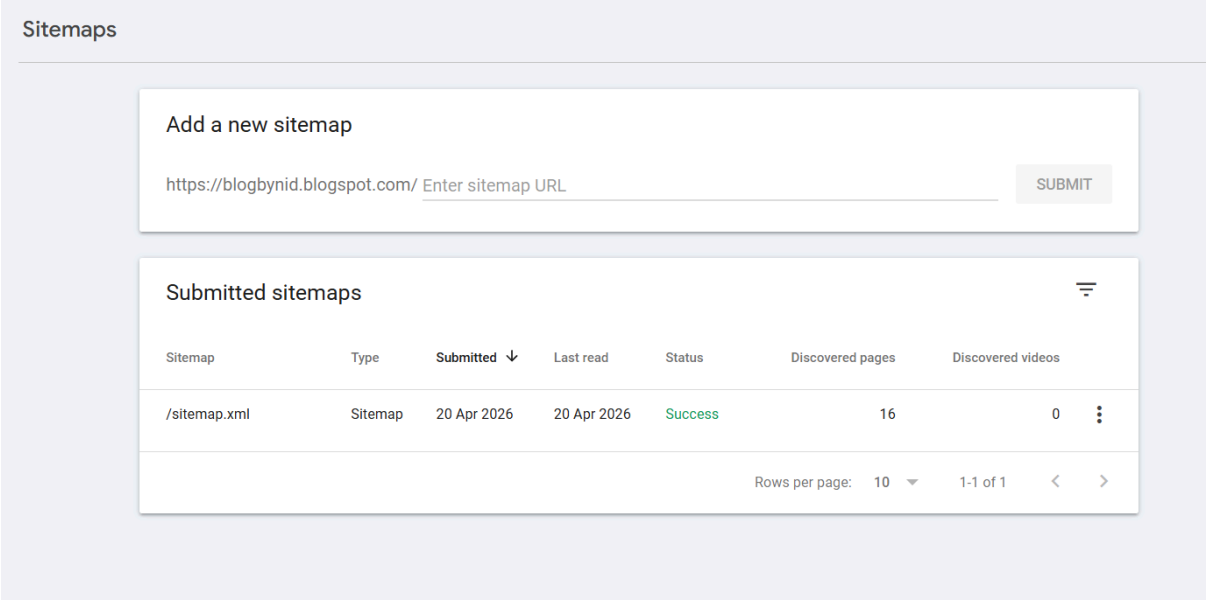


Added faculty as user with required permission in Google Tag Manger:

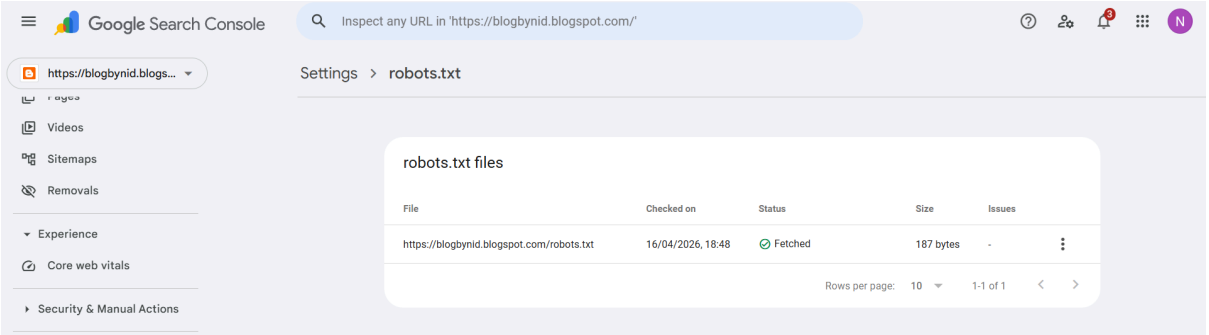


3. Submit the sitemap and robot.txt file in the search console for your website.

Submitted sitemap in Search Console:



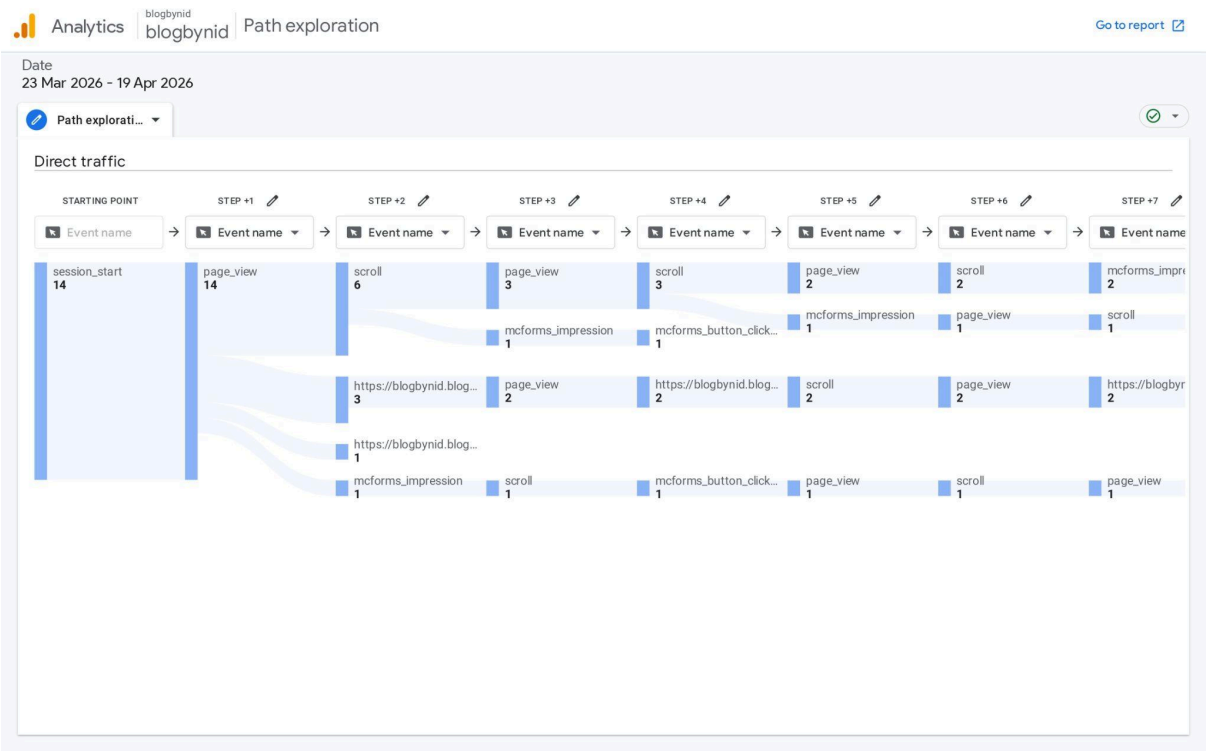
Submitted robots.txt in Search Console:



Robots.txt is accessible

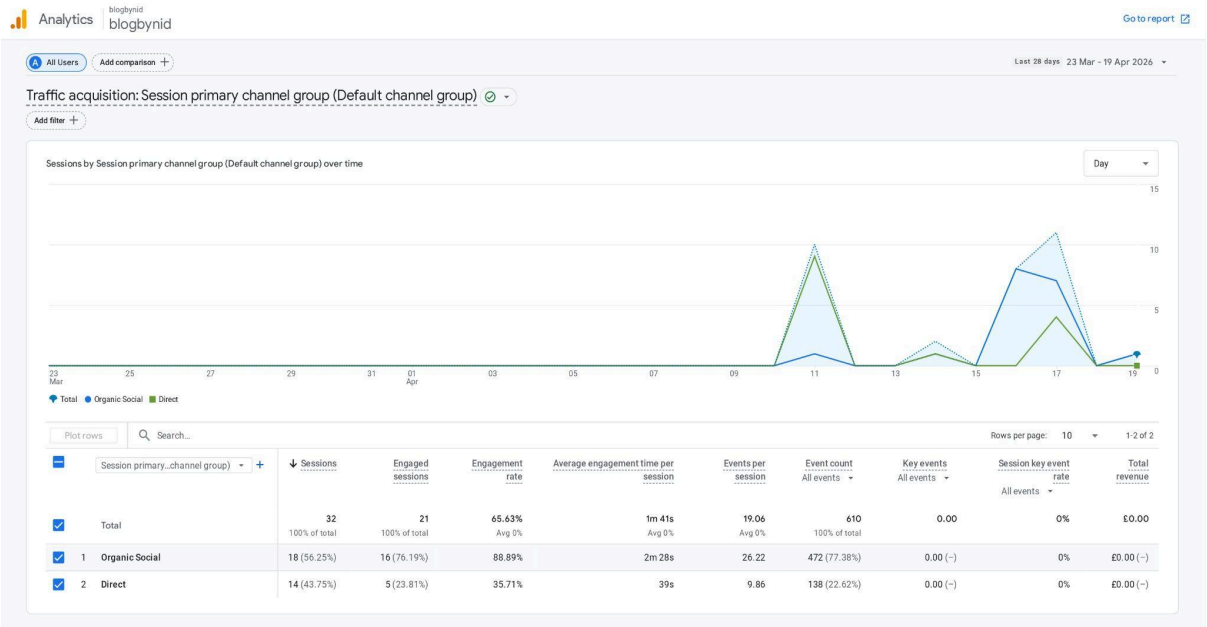
4. Submit the user flow and traffic source reports for your website.

User Flow Report



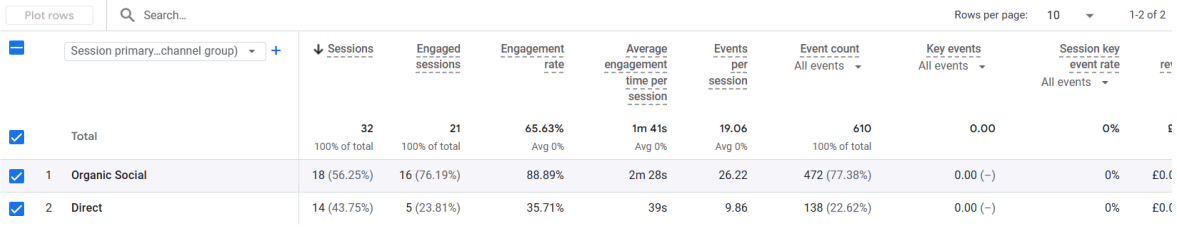
The user flow report shows how visitors navigate through the website. Most users begin with page views, followed by scroll activity, indicating content engagement. Some users interact with form elements, showing initial user interaction on the site.

Traffic Source:



The Traffic Acquisition report shows that the majority of traffic (56.25%) is coming from Organic Social, while 43.75% comes from Direct sources. This indicates that current visitors are primarily driven by social media activity rather than search engines.

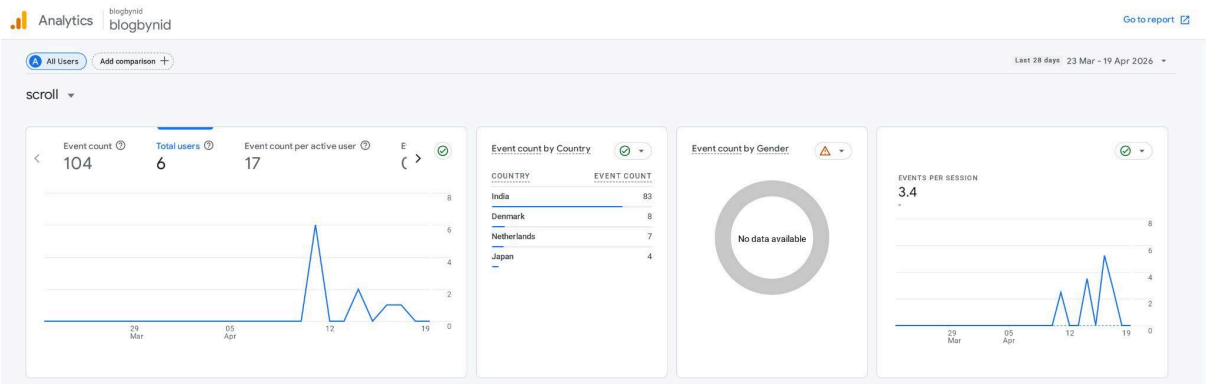
5. Connect your blog to Google Analytics and study the different types of traffic on your site.



The website receives traffic mainly from Organic Social and Direct sources. Organic Social contributes 56.25% of total sessions and has a high engagement rate of 88.89% with an average engagement time of 2 minutes 28 seconds, indicating highly interested users. On the other hand, Direct traffic contributes 43.75% of sessions but has a lower engagement rate of 35.71% and shorter engagement time. This shows

that users coming from social media are more engaged compared to direct visitors.

6. Create a goal for your business and study reports whether it has been completed or not.

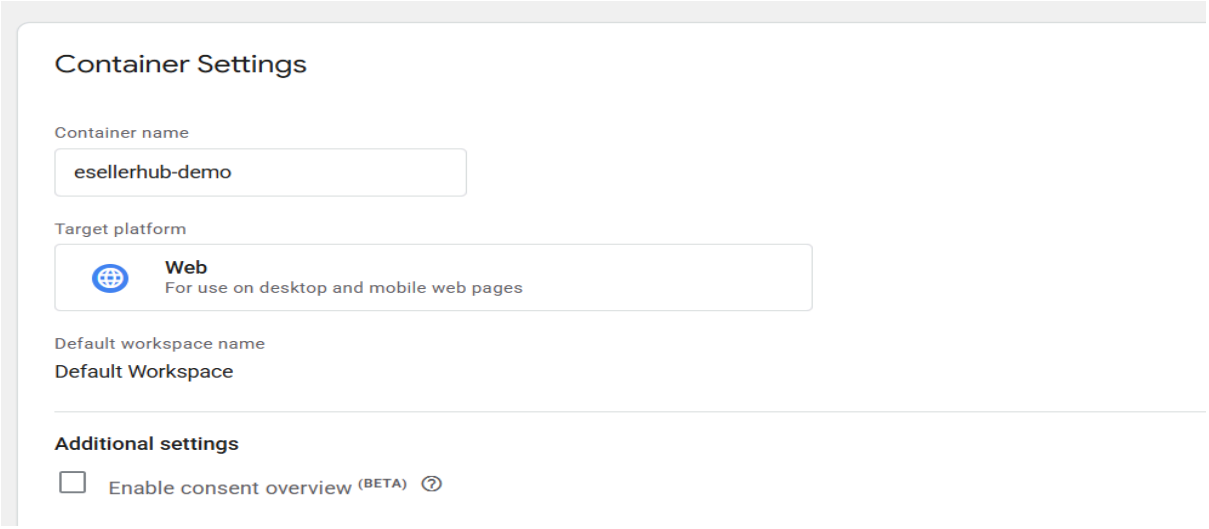


A goal was created by marking the "**scroll event"** as a key event to track user engagement on the website. The report shows that the scroll event has been triggered 104 times by 6 users, indicating that visitors are actively interacting with the website. This confirms that the goal has been successfully completed.

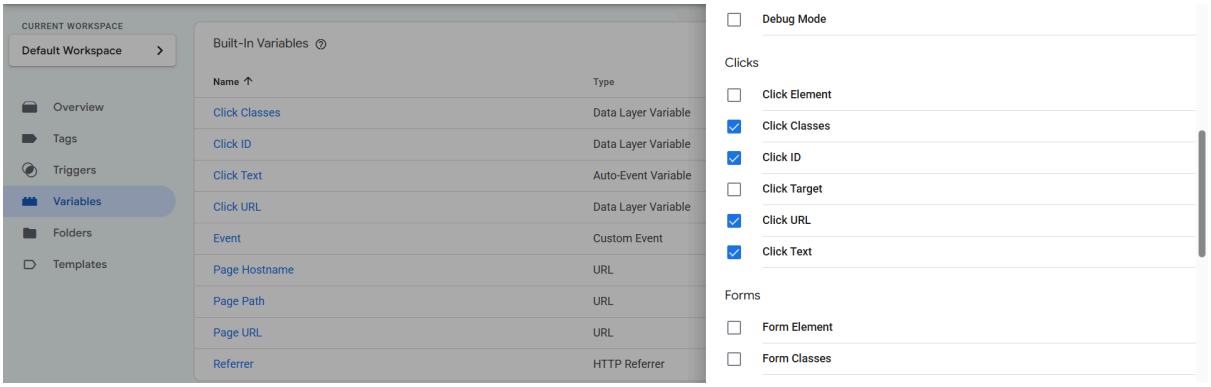
7. Track the following interactions in Google tag manager for www.esellerhub.com

- **Link clicks**
- **Page load**
- **Time (How long a visitor stayed on a particular page)**
- **Button click**

Step 1: Container created for **www.esellerhub.com**



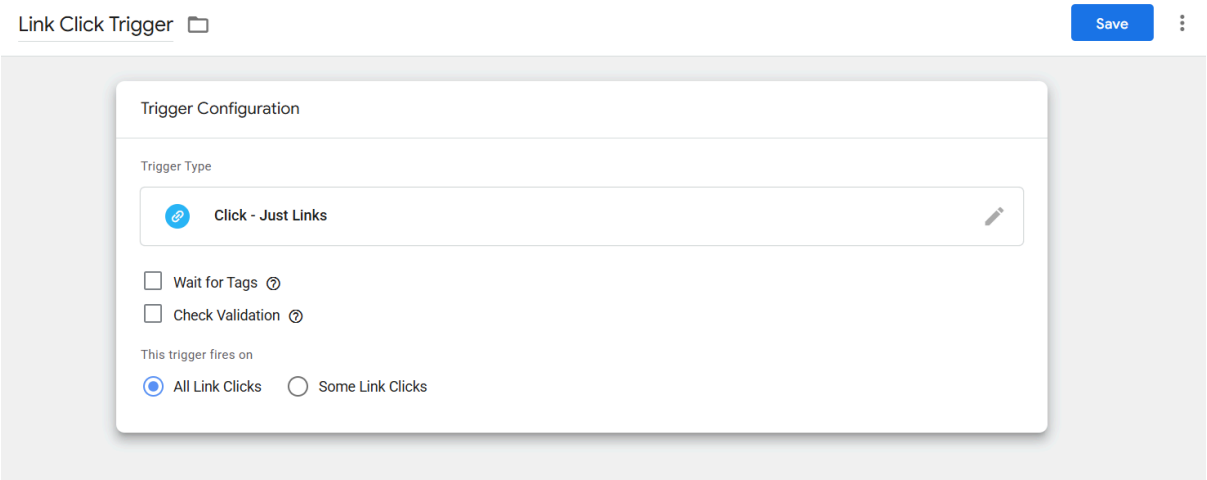
Step 2: Enable Click Variables
Without this clicks won't work:



Added:
Click URL
Click Text
Click Classes
Click ID

Step 3: Create Link Click Tracking

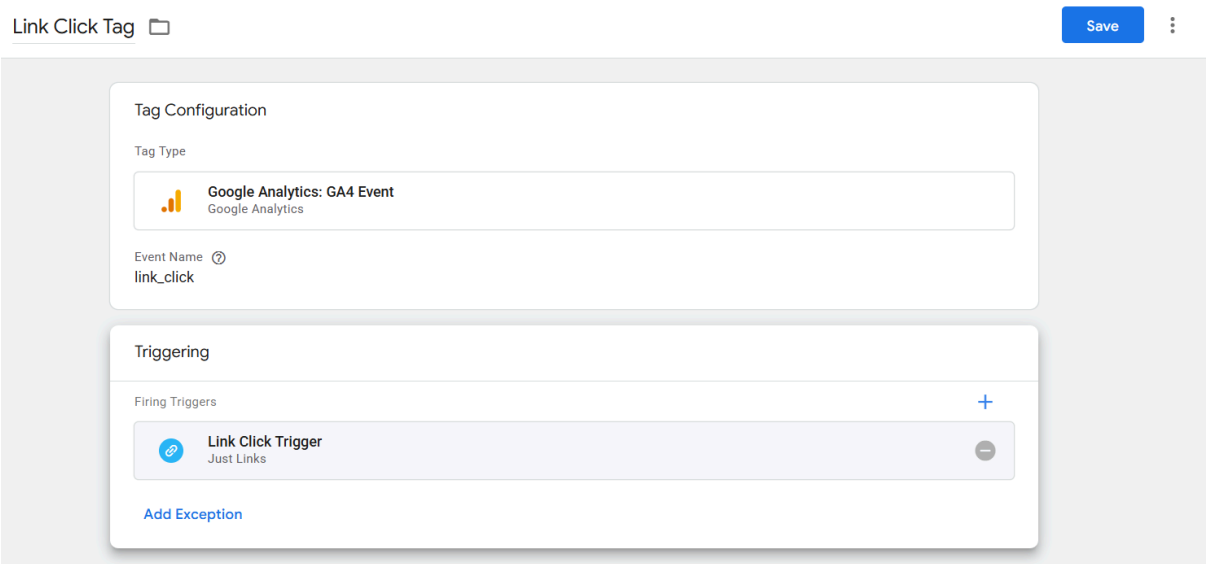
Go to Triggers > New > Trigger Configuration > Choose Trigger Type: **Just Links** Under Click Section > save

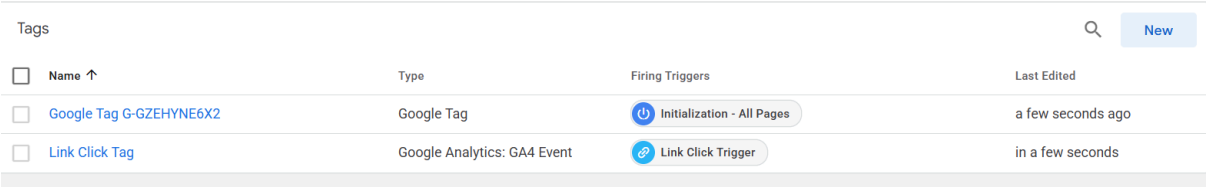


Create Tag:

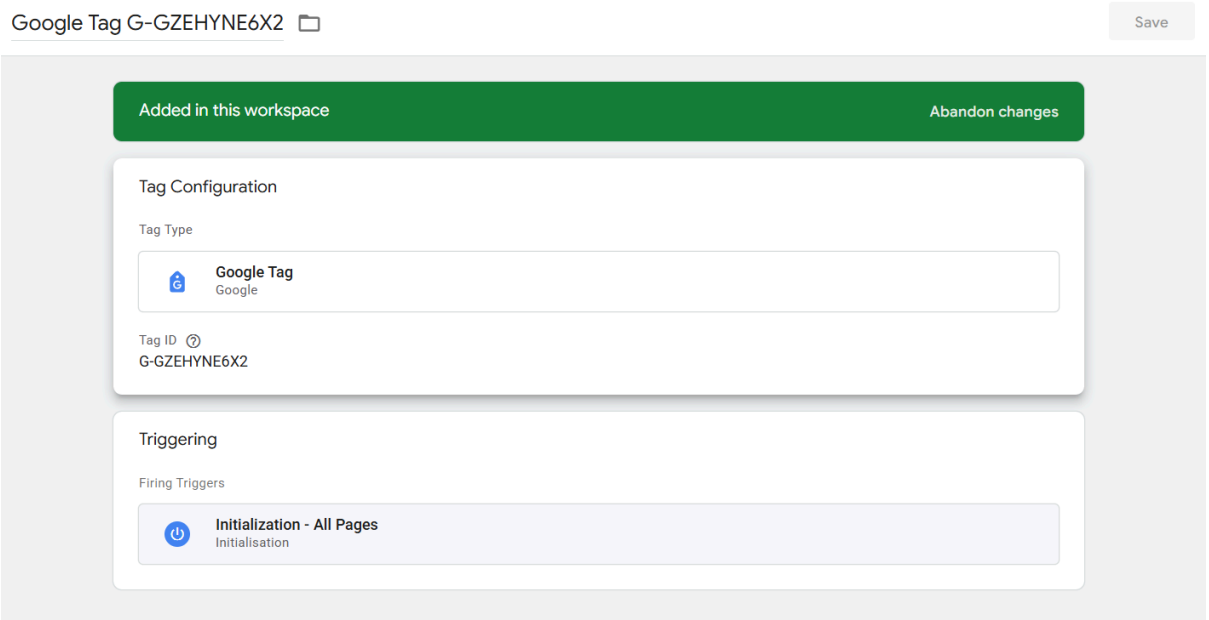
Go to Tags > New > Click Tag Configuration > Choose Tag type: **Google Analytics: GA4 Event**

Select Trigger configuration > Choose a trigger: Link Click Trigger > save





Step 4: PAGE LOAD Tracking

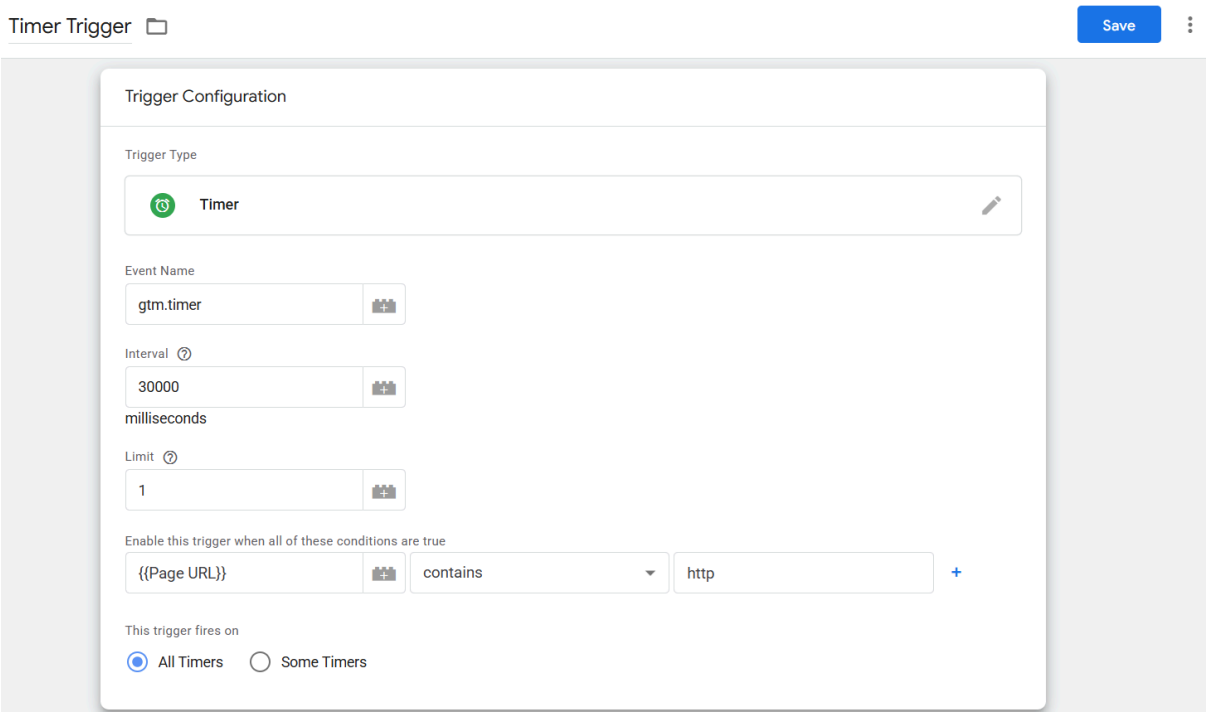


Page load tracking is implemented using the Google Tag, which fires on all pages to track user visits.

Step 5: TIME ON PAGE Tracking

Create Trigger:

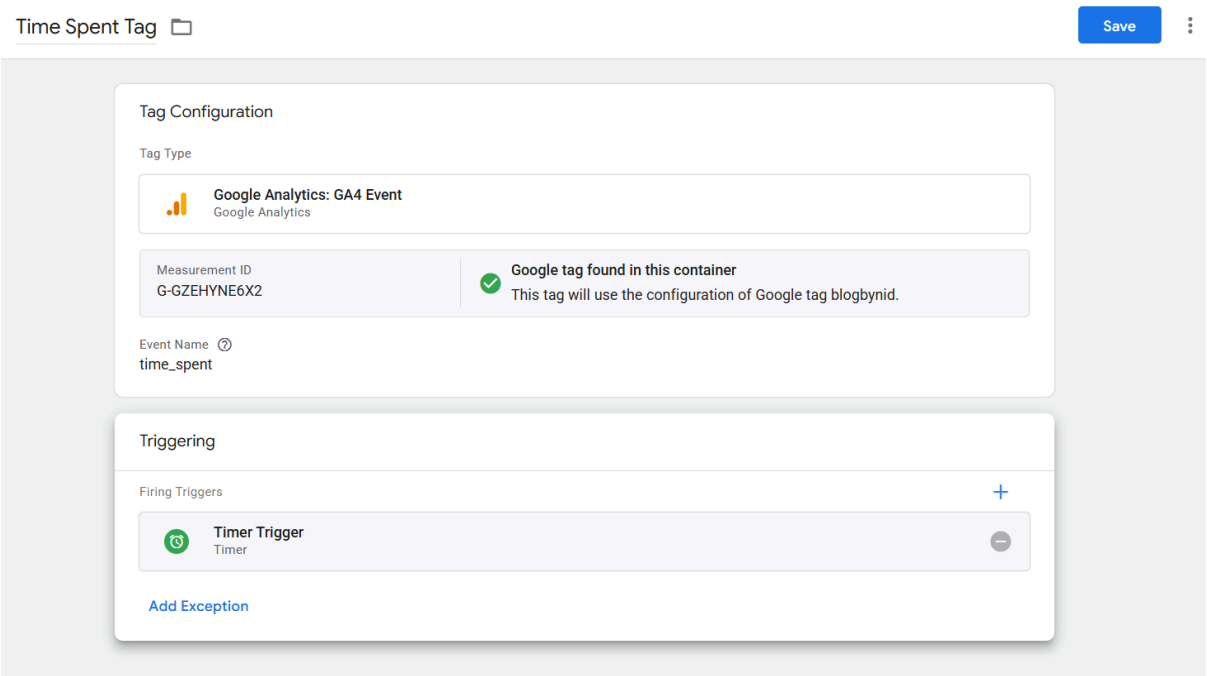
Trigger configuration > Under others section choose: **Timer**



Create Tag:

Tag > New Tag > Tag type: Google Analytics: GA4 Event > Enter event name & measurement ID

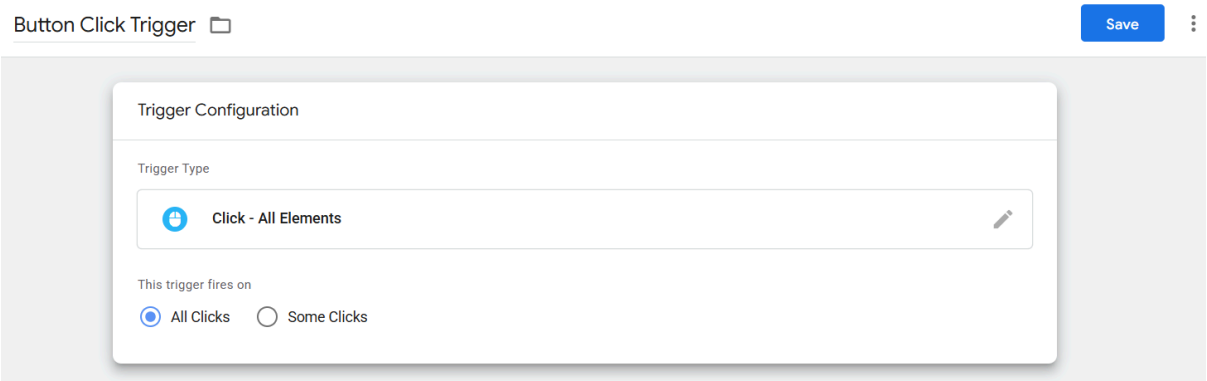
In Triggering select: **Timer Trigger**



Step 6: BUTTON CLICK Tracking

Create Trigger:

Triggers > In trigger type under Click section select all elements > all clicks > save

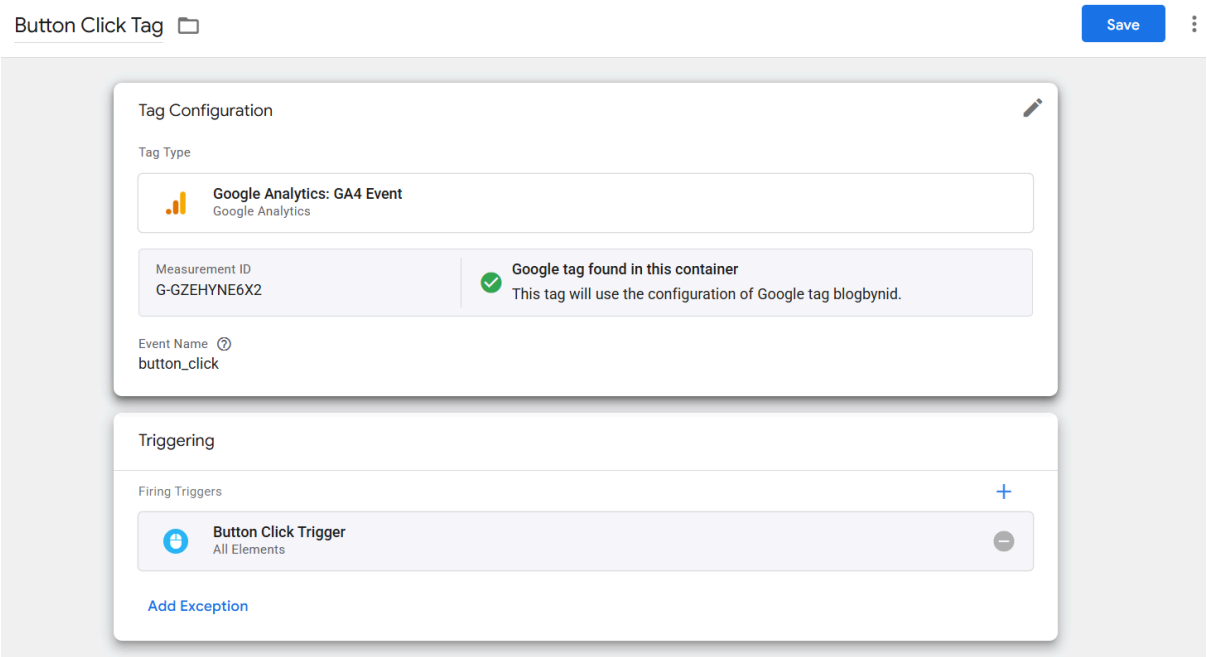


Create Tag:

Tags > New > Tag type: GA4 Event > Enter Measurement ID & Event Name: button_click

In triggering select: Button Click Trigger

Save.



Step 7: Click Submit

Version 2 - Tracking Setup
