Module - 4

What are the main factors that can affect PPC bidding?

Ans: The main factors that affect PPC bidding include competition in the market, keyword demand, quality score, and audience targeting. High competition and popular keywords increase bid costs, while a better quality score can lower costs. Ad relevance, landing page experience, and bidding strategy also play a key role in determining final bid amounts.

How does a search engine calculate actual CPC?

Ans: A search engine calculates actual CPC (Cost Per Click) based on your Ad Rank and the Ad Rank of the competitor below you. It uses the formula: Actual CPC = (Ad Rank of competitor below ÷ Your Quality Score) + ₹0.01. This means you often pay less than your maximum bid, depending on competition and quality score.

What is a quality score and why it is important for Ads?

Ans: Quality Score is a metric used by search engines to measure the relevance and quality of your keywords, ads, and landing pages. It is important because a higher quality score reduces cost-per-click (CPC), improves ad rank, and helps your ads get better positions, leading to more clicks at lower cost.
